

Potable Water Course

for maritime & offshore

Water

Water is a unique and many-sided product. Water lives and creates life. There are many sorts of water like drinking water, process water, cooling water, sewage water etc. So many sorts of water, so many sorts of problems. The problems with water are multifarious like scale, bacteria, lack of water, problems with odour and taste, corrosion etc. In order to prevent or overcome these problems adequately there is a wide range of water processing and treatment technologies. The right selection of these makes it possible to purify and condition your water to meet up to your requirements entirely.

Training

To make the right selection for water processing and treatment it is important to have the knowledge of the different processes. Hatenoer-Water can provide Potable Water Training for Maritime and Offshore personnel. The course book is in English and therefore suitable for personnel from all nations. The course itself can be given in Dutch or English.

Content of the course

1. Water in general
2. Water supply
3. Water storage systems
4. Water distribution system
5. Standard maritime flow chart
6. Disinfection
7. Health risks
8. Water safety plan
9. Management
10. Operational monitoring
11. Test kits and alike
12. Water examinations

The course gives a clear view of water technology and treatment. Some organizations demand that personnel on mobile offshore installations have proven knowledge of the existing water treatment and knowledge how to handle with inaccurate results. **Hatenboer-Water can provide this knowledge!!**

Exam & Certificate

The course will be finalized with an exam and a certificate of participation.

Instructors

The instructors are well educated in water treatment and technology and have extensive practical experience in the maritime sector.

HATENBOER-WATER, SPECIALIST IN MARITIME WATER TREATMENT
